IMAGE MANIPULATION FOR THE RADIOLOGIST

Carl Kalbhen, MD

IMAGE MANIPULATION FOR THE RADIOLOGIST

Special thanks to Paul Chang, MD, for valuable lessons provided in 2005

PowerRAD: Introduction to Personal Image Management and Presentation

Paul J. Chang, M.D.

Division of Radiology Informatics
University of Pittsburgh School of Medicine
UPMC Health System

Radiologists in many ways act as photographers and image editors.....albeit with unique and uber expensive cameras

Photography principles in day-to-day radiology

Exposure

Technique

Contrast

Media

Window/level

Framing/cropping

Field-of-view

Viewpoint

Cross-sectional plane

Planar angle

```

Videos

Presentations

PowerPoint

Keynote

Resolution

DPI (dots per inch....really pixels per inch)

72 DPI standard web

300 DPI standard print

600 DPI high-resolution print

Various stages in between

Resolution

Modality

Cross-sectional (sonography, NM, CT and MR)

Typically 256 x 256 or 512 x 512

For a 4" image, about 64 or 128 DPI

Radiography

About 300 DPI

Mammography

About 600 DPI

Resolution

Saving from PACS (Centricity at least)

Automatic/default 72 DPI.....even for mammo

DICOM

Digital Imaging and Communication in Medicine

TIFF/TIF

Tagged Image File Format

JPEG/JPG

Joint Photographic Experts Group

PNG

Portable Network Graphics

```
Typically greyscale

12 bit (4096 shades)

DICOM

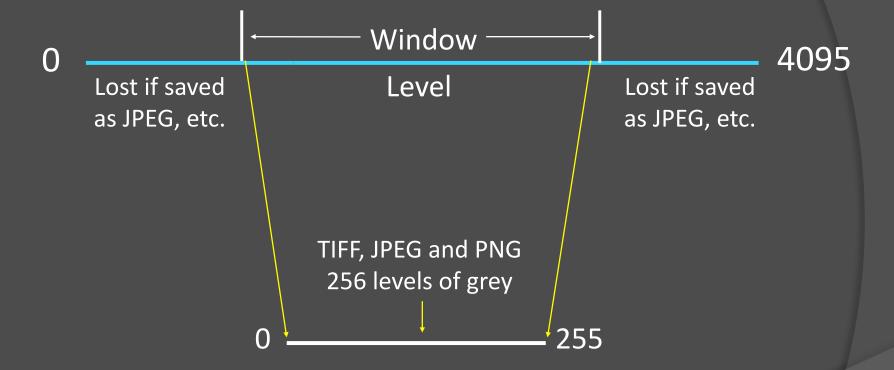

8 bit (256 shades)

TIFF

JPEG

PNG
```

DICOM also contains textual data (eg, study parameters, patient demographics) and is more than an image format

Data compression

Ubiquitous

Makes file sizes smaller when saving

Types

Lossless

Lossy

```
Lossless
```

Ratio 2:1.....at best

No data is lost

Lossy

Variable ratios.....often on order of 20:1

Data is permanently lost

Inexact approximations

Partial discarding

Lossy

```
Lossless
DICOM
Legally must be lossless
TIFF
PNG
Lossy
JPEG
```

JPEGs

Can't live with 'em, can't live without 'em

Every time a JPEG is saved, data/quality is permanently discarded

JPEQ quality levels

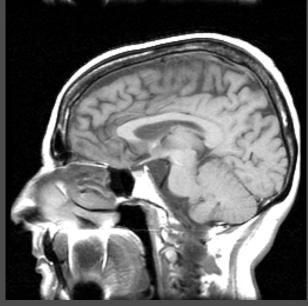

0-100 (standard)

1-12 (Adobe)

Higher quality level preserves data

DICOM

TIFF

JPEG 100

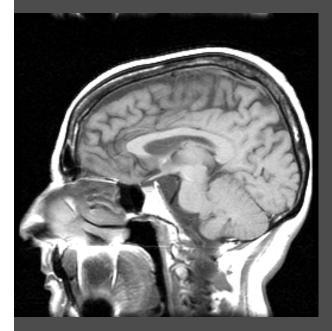

Full spatial fidelity
Full dynamic range (W/L)
Format not fully supported
131 kB

Full spatial fidelity
Limited dynamic range (W/L)
Format mostly supported
200 kB

Variable spatial fidelity Limited dynamic range (W/L) Format 100% fully supported 50 kB

JPEG

Quality = 100 4:1 compression 50 kB

Quality = 50 20:1 compression 10 kB

Quality = 10 50:1 compression 4 kB

(DICOM image size: 131 kB)

JPEG

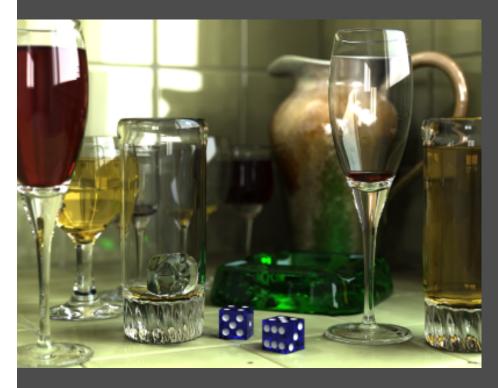

Quality = 100

Quality = 25

JPEG

Quality = 100

Quality = 100 - 25

JPEG

"Lost with lossy" Edges

Blur

Ripples

Echoes

Quality = 25

HIPAA compliance

Tweaks

Editing

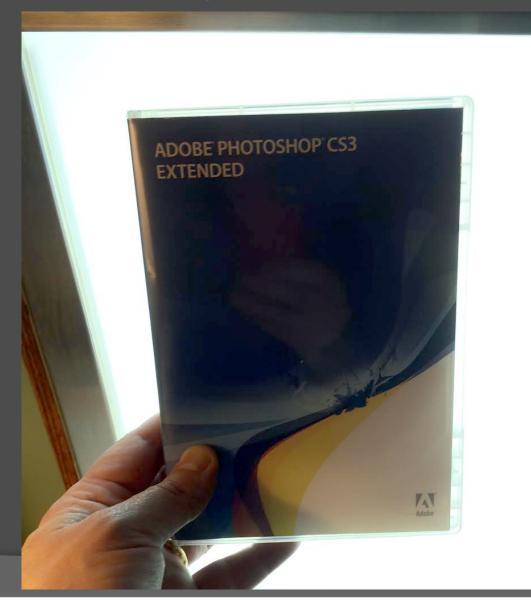

Photoshop

Does a lot, costs a lot

Everything else

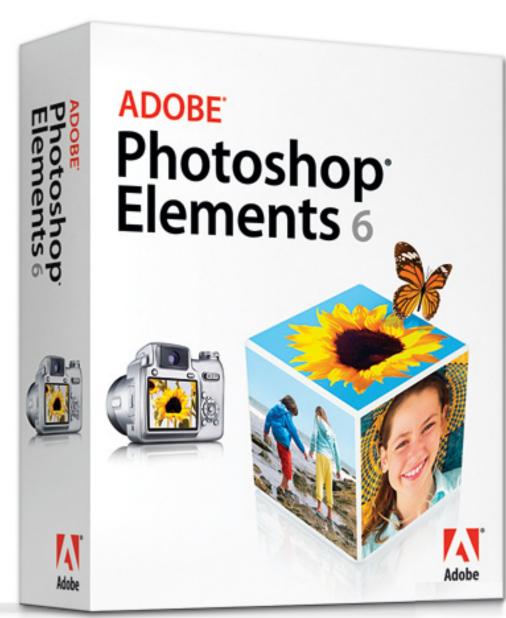

Does less, costs less....or nothing

Editing

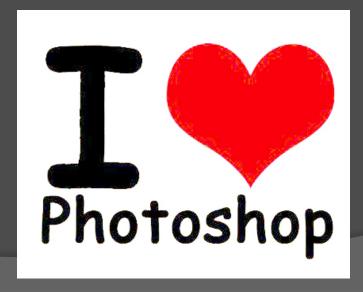

Photoshop

Now a subscription

Part of "Creative Cloud"

Many more products available than Photoshop

I have no financial relationship with Adobe

Editing

Photoshop

Cheapest is \$10/month

I pay way more for full Creative Cloud

Cheap/free alternatives

Many exist

Acceptable for radiologists' needs

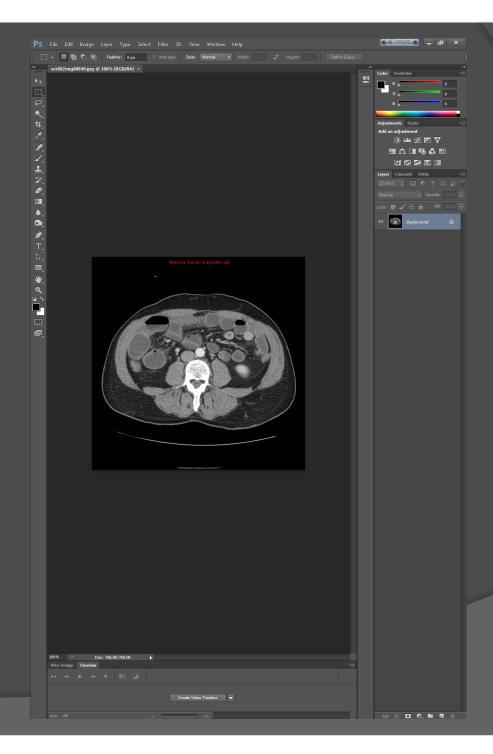

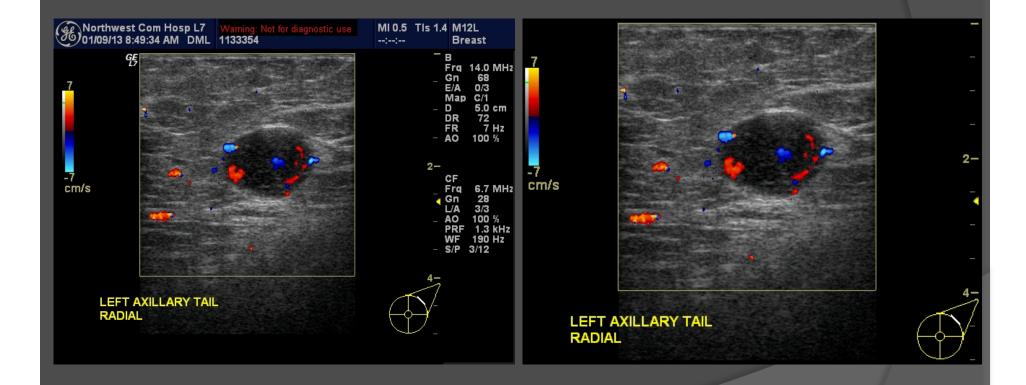

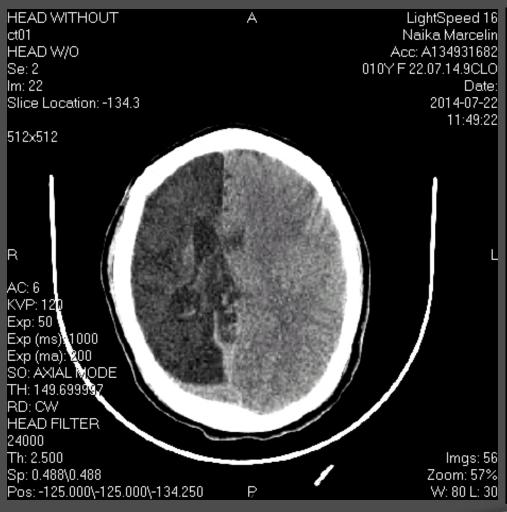

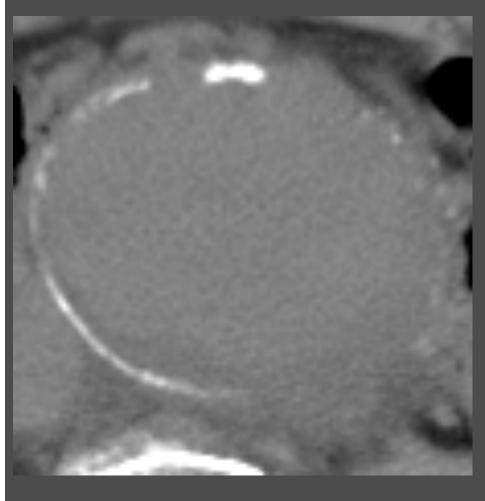

Tell Denver mammo story

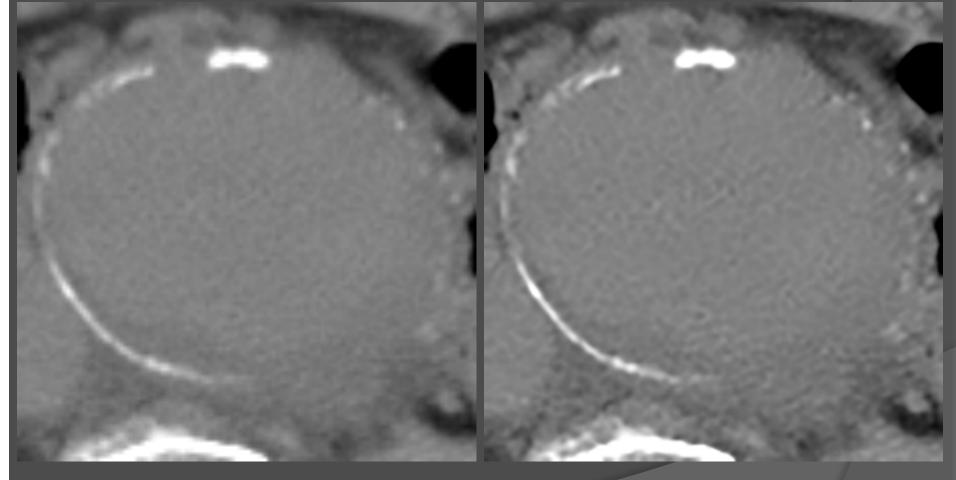

Can "increase" resolution

72 DPI TIFF

300 DPI TIFF

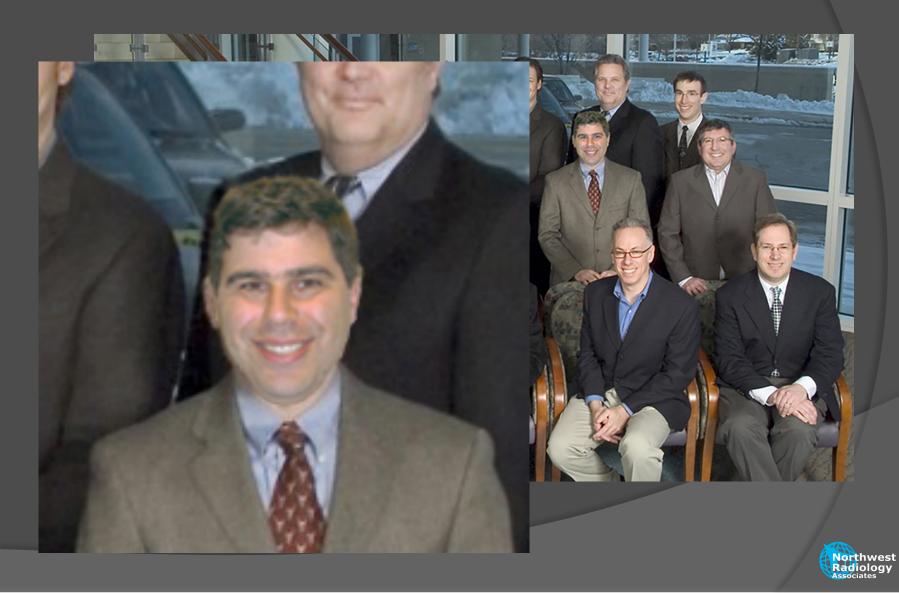

?miliary tuberculosis

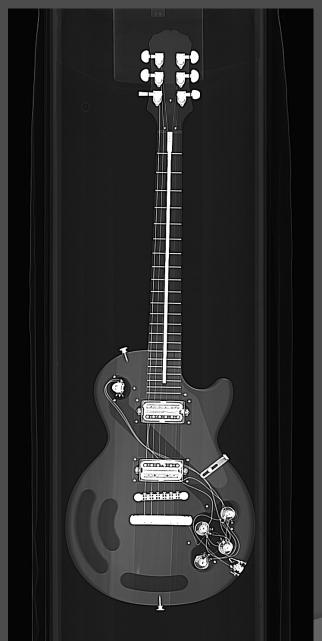

No one knows every "trick"

I have taken 4 courses in 10+ years

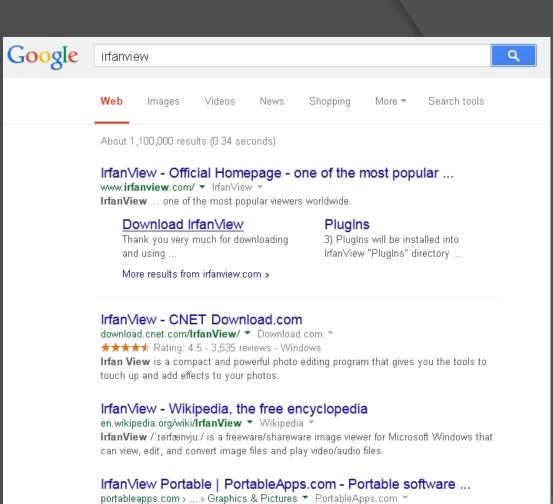

Knowing a little can help a lot

Everything Else

Free software
Windows
Ifranview
"Photoshop Lite"

Jun 26, 2014 - IrfanView Portable is a fast, compact and innovative graphic viewer for Windows supporting pictures, vector graphics, animated images, movies ...

Download IrfanView 4.38 - FileHippo.com

filehippo.com/en/download_irfanview/ 🔻

★★★★ Rating: 4 - Free - Multimedia

IrfanView is a very fast, small, compact and innovative Freeware (for non-commercial use) graphic viewer for Windows, IrfanView features include:.

Ifranview

Supports DICOM

Easy to use

No course necessary

Windows only

Ifranview

Great for batch cropping

Easier than Photoshop

Needed for videos

The End
